BOTANICAL GAZETTE
# TABLE OF CONTENTS

The development of the vascular structure of *Dianthera americana* (with plates I–IV)  
W. Ralph Jones  

The toxic action of organic compounds as modified by fertilizer salts (with five figures)  
Oswald Schreiner and J. J. Skinner  

The effect of external conditions upon the after-ripening of the seeds of *Crataegus mollis*. Contributions from the Hull Botanical Laboratory  
Wilmer E. Davis and R. Catlin Rose  

The structure of the stomata of certain Cretaceous conifers (with plates V and VI)  
W. P. Thompson  

Spermatogenesis in *Equisetum*. Contributions from the Hull Botanical Laboratory  
Lester W. Sharp  

The primary color-factors of *Lychnis* and color-inhibitors of *Papaver Rhoeas*  
George Harrison Shull  

Contributions from the Rocky Mountain Herbarium XI (with two figures)  
Aven Nelson  

Beneficial effect of creatine and creatine on growth (with one figure)  
J. J. Skinner  

The life history of *Aneura pinguis*. Contributions from the Hull Botanical Laboratory  
Grace L. Clapp  

Plant geography of North Central New Mexico. Contributions from the Hull Botanical Laboratory  
J. R. Watson  

The perfect stage of *Actinonema rosae* (with plate XIII)  
Frederick A. Wolf  

Undescribed plants from Guatemala and other Central American Republics. XXXV  
John Donnell Smith  

Influence of phosphate on the toxic action of cumarin  
J. J. Skinner  

Comparative anatomy of dune plants. Contributions from the Hull Botanical Laboratory  
Anna M. Starr  

*Parnassia* and some allied genera (with plates XIV–XVII)  
Lula Pace  

Development of the microsporangia and microspores of *Abutilon Theophrasti* (with twelve figures)  
V. Lantis
The development of *Blastocladia strangulata*, n. sp. (with plates XVIII–XX) J. T. Barrett 353

The orchid embryo sac (with plates XXI–XXIII) Lester W. Sharp 372

Growth studies in forest trees. 1. *Pinus rigida* Mill. (with plates XXIV and XXV) Harry P. Brown 386

Contributions from the Rocky Mountain Herbarium. XII Aven Nelson 404

Two species of *Bowenia*. Contributions from the Hull Botanical Laboratory 162 (with four figures) Charles J. Chamberlain 419

Life history of *Cutleria*. Contributions from the Hull Botanical Laboratory 163 (with fifteen figures and plates XXVI–XXXV) Shigéo Yamanouchi 441

The nature of the absorption and tolerance of plants in bogs Alfred Dachnowski 503

Ingrowing sprouts of *Solanum tuberosum* (with plate XXXVI and six figures) C. Stuart Gager 515

The abortive spike of *Botrychium*. Contributions from the Hull Botanical Laboratory 164 (with twenty-one figures) O. O. Stoland 525

Plants which require sodium (with two figures) W. J. V. Osterhout 532

**Briefer Articles**—

Eduard Strasburger (with two portraits) Charles J. Chamberlain 68

A note on the generations of *Polysiphonia* (with one figure) George B. Rigg and Annie D. Dalgity 164

Absorption of barium chloride by *Aragallus Lamberti* C. Dwight Marsh 250

Artificial production of aleurone grains (with one figure) W. P. Thompson 336

A new species of *Andropogon* A. S. Hitchcock 424

Evaporation and the stratification of vegetation (with one figure) George D. Fuller 424

The perfect stage of the *Ascochyta* on the hairy vetch George F. Atkinson 537

*Gauteria* in the Eastern United States George F. Atkinson 538

**Current Literature** — 73, 166, 253, 339, 427, 540

For titles of book reviews see index under author’s name and reviews

Papers noticed in “Notes for Students” are indexed under author’s name and subjects

**DATES OF PUBLICATION**

No. 1, July 15; No. 2, August 16; No. 3, September 21; No. 4, October 15; No. 5, November 13; No. 6, December 16.
ERRATA

P. 1, to title add index', and append footnote Contribution from the Botanical Laboratory of the Johns Hopkins University, No. 24.

P. 51, line 3 from bottom, for than read then.

P. 57, line 14 from top, for carpel read carpels.

P. 79, footnote 2, for VOLGER read VOGLER.

P. 88, footnote 34, for COMBES, RAOUT read COMBES, RAOUl.

P. 127, change lines 14–20 to read as follows: be 1 white-flowered to 1 purple-flowered, or in this particular family 13 white-flowered to 13 purple-flowered, to which expectation the observed result is not in sufficiently close agreement even considering the small number of individuals. If the rubrum parent were heterozygous in respect to both the primary factors for color, C and R, it being assumed that the album parent lacked both these factors, a 3:1 ratio would result.

P. 127, line 28, omit also.

P. 148, line 19, for CASTILLEJA VISCIA read CASTILLEJA VISCIDA.

P. 164, line 19, omit on before Griffithsia and Delesseria.

P. 164, line 21, insert regularly before borne.

P. 165, legend of fig. 1, for a Polysiphonia (?) read the plant referred to in this note.

P. 191, last line, for Eracheinungen read Erscheinungen.

P. 208, line 8, for practically read partially.

P. 235, line 8 from bottom, omit hyphen between subtus and fusco.

P. 252, line 11, for 37.095 read 37.95.

P. 269, line 13, for into read in to.

P. 274, line 11, for slight read slightly succulent.

P. 277, line 1 of Celtis table, for (87–72) read (27–72).

P. 281, line 1 of Ostrya table, for (66–95) read (66–93).

P. 297, line 11 from bottom, after reported insert (3).

P. 393, line 2, for began read begins.

P. 405 for Calochortus umbellatus read Calochortus euumbellatus; line 10 from bottom, for C. umbellatus read C. euumbellatus.

P. 419, line 5, for in the Tropic read on the Tropic.

P. 428, footnote 2, for 1912 read 1911.
